

Right-sized shipping boxes made on site and on demand

- Cut shipping costs
- Eliminate box inventory
- Streamline packing
- Handle variable product shipments with ease

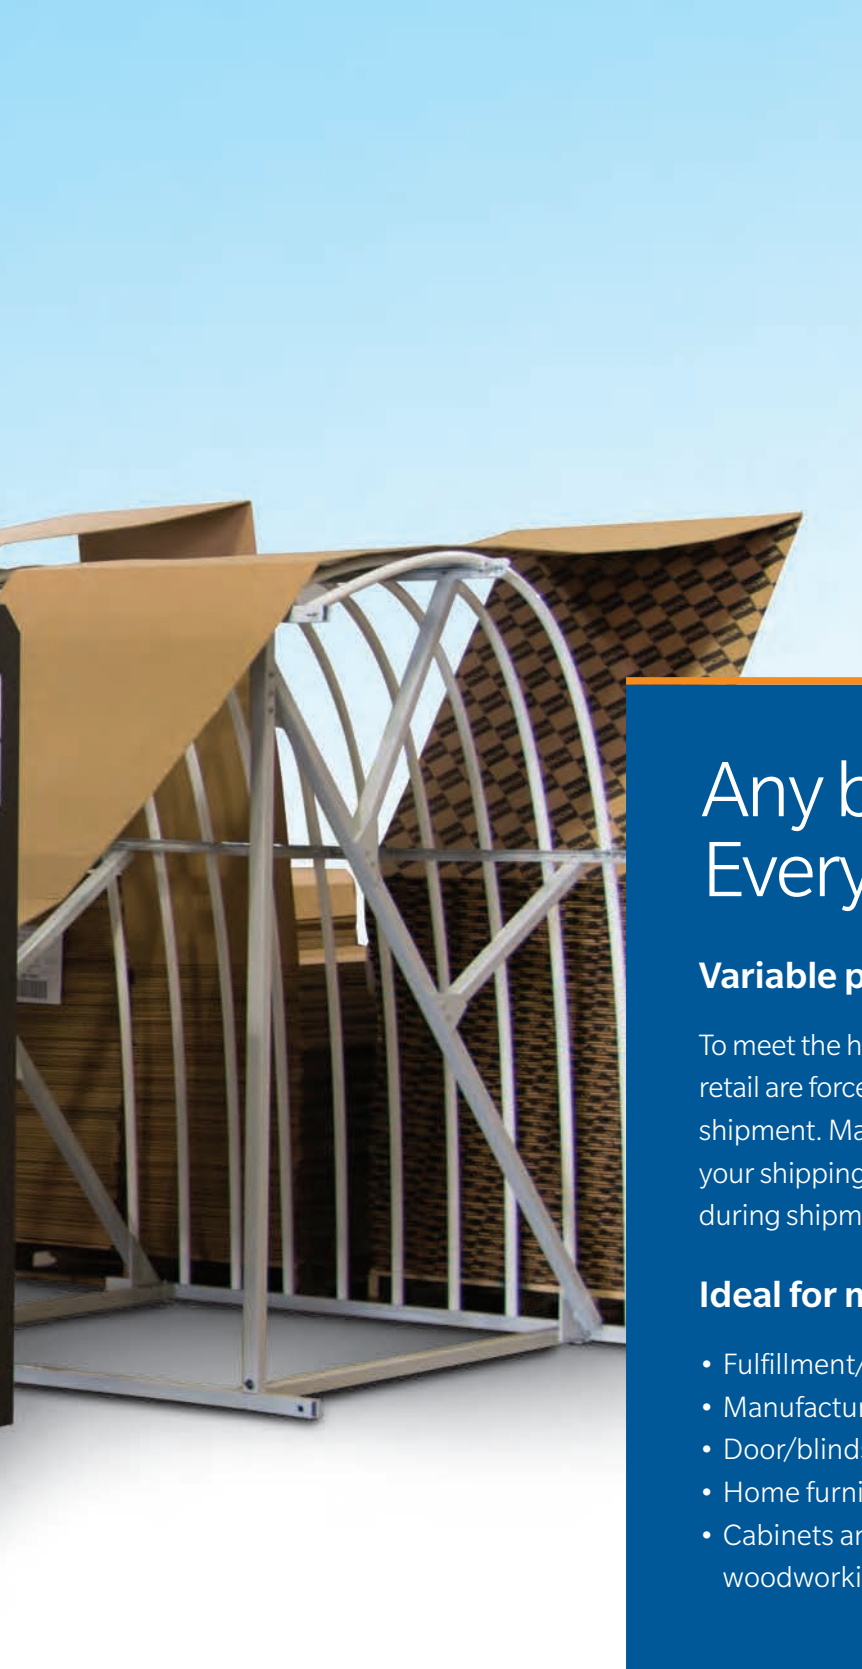

Technology engineered for today's dynamic packing environment

Panotec Compact 1.4 meter side-by-side

Any box. Sized right. Every time.

Variable packing is the standard

To meet the high demand for online ordering, both manufacturing and retail are forced to pack larger, more variable, and oddly sized items for shipment. Making right-sized boxes, per order gives you control over your shipping costs while decreasing the likelihood of product damage during shipment.

Ideal for many operating environments

- Fulfillment/e-commerce
- Manufacturing
- Door/blinds
- Home furnishings
- Cabinets and woodworking
- Large format printing and books
- TV and electronics overboxing
- Fabricated metal parts
- And more!

Compack series box machines

Compack 2.5 meter inline side-by-side

- 2.5 meter machine has a high ratio of total board width relative to footprint
 - The unique inline, side-by-side configuration allows for maximum board types and sizes while using minimal floor space
- Industry's only inline corrugate infeed
- Narrow head technology
 - Increased range of producible box styles from a single machine
 - Up to 12 cutting and creasing heads available for complex box designs
- Optional dual positioning robots for maximum throughput in high volume applications

Compack 1.4 meter side-by-side

- 1.4 meter machine designed for uses where single or dual board grades are the norm and product shipments tend to be smaller in size
 - Exclusive BoxLink Pro® Software Suite
 - Simple user and pro level operator interface
 - Analytical reporting functions with data export features
 - Fanfold management
 - WMS or ERP integration

Automatic gluing machines

- Heavy-duty, reliable design for 24/7 operation
- Optional direct integration with box machine for optimal batch production
- Comprehensive standard safety features
- Gluer options for box styles and sizes with an extra long glue flap
- Automatic board detection and glue placement
- Dual operator configuration available

Matrix™ dimensioning system

Quickly and accurately dimension orders for right-sized boxes using a BOD Matrix integrated with any box machine. This system is ideal for multi-product orders, large or oddly shaped items, overbox applications, returns, and repacking. The Matrix can be easily integrated into many packing environments such as pick-to-cart, pick-to-box, pack-at-a-line and more.

Tailored support and consultation to meet your needs

Every WestRock Box On Demand system is designed to fit your application. Through our consultative process, we learn about your packing needs and goals. Our experienced team designs the optimal system for your application; maximizing productivity and cost savings.

WestRock Box On Demand[®] serves a broad spectrum of customers across fulfillment and manufacturing with machines and systems designed for making right-sized corrugated boxes on demand.
